

Year 6 – Electrical Systems – Autumn 2022

The Year 6 children, in Design Technology lessons, have been exploring games that use electrical systems including lights and alarms and circuits that include bulbs and buzzers. The children designed and created their own steady handy game using a chosen wired shape and an electrical system that worked correctly. They discussed ways for how to improve their product by strengthening it and making it more secure. The children tested their designs and evaluated their finished product.
